PROFESSIONAL SUMMARY

Python Full Stack Developer with **3+ years of experience** in building scalable web applications. Skilled in **Python, Django, FastAPI and JavaScript** with a strong focus on developing high-performance REST APIs and optimize backend systems for efficiency. Experienced in working with **MySQL**, with basic knowledge of **AWS**.

WORK EXPERIENCE

04/2025 – Present | Bangalore

Python Full Stack Developer

LUMINAIRE TECHNOLOGIES - (Client : Reliance)

- Developed and maintained scalable REST APIs using Python, Django, and Django REST Framework for fashion trend and product management modules, ensuring secure and high-performance backend services
- Built and integrated responsive frontend components using React JS, JavaScript, HTML, and CSS, connecting UI with backend APIs for real-time trend analysis and product management features
- Implemented JWT authentication, middleware, request/response logging, rate limiting, and tested APIs using Postman for secure communication and smooth frontend-backend integration
- Worked with MySQL, AWS RDS, and AWS S3 for database management, cloud storage, media/file handling, and efficient data processing within the application
- Monitored application logs and production issues using AWS CloudWatch, performed debugging, version control with Git/GitHub, and actively participated in Agile/Scrum ceremonies including stand-ups and sprint planning

11/2024 – 03/2025 | Hyderabad

Python Full Stack Developer

Cye Technology PVT. LTD.

- Developed a full-stack Job Portal application using Python and FastAPI framework, designing and implementing RESTful APIs for user management, job postings, applications, and recruiter functionalities
- Built responsive and dynamic frontend components using React JS, JavaScript, HTML, and CSS, ensuring seamless integration with backend services and improved user experience
- Implemented secure JWT authentication and role-based access control for users, recruiters, and admin modules within the application
- Worked with MySQL and AWS RDS for database management, query handling, and efficient storage of job, user, and application data
- Used Git/GitHub for version control, performed API testing using Postman, handled debugging in development and production environments, and collaborated in Agile/Scrum activities

06/2023 – 11/2024 | Bangalore

Python Developer

INTECHFY SOLUTIONS - (Client: DXC Technology)

- Developed and maintained backend REST APIs using Python and Django to manage customer profiles, loan applications, and approval workflows.
- Engineered backend logic for automated EMI calculations, repayment scheduling, and financial data processing.
- Integrated AWS S3 and configured storage settings to securely manage financial documents, enabling seamless upload and retrieval of loan agreements via REST APIs.
- Handled relational data using MySQL, rigorously tested and validated all API endpoints using Postman, and utilized Git/GitHub for version control and team collaboration.

TECHNICAL SKILLS

- **Backend:** Python, FastAPI, Flask, OOPS, Django, REST API Development
- **Frontend:** JavaScript, HTML, CSS, React JS
- **Database:** RDS, Sqlite, SQL, MySQL (Schema Design, Query Optimization)
- **API Documentation:** Swagger / OpenAPI
- **Tools & Technologies:** Git, GitHub, Postman (API Testing), VS Code, PyCharm, Linux, Windows
- **Cloud:** AWS (S3, RDS, CloudWatch)

EDUCATION QUALIFICATION

B.Tech (Computer science and Engineering)

2024 | Markapur, AP

Dr. Samuel George Institue Of Engineering And Technology

PERSONAL SKILLS

- Excellent communication, analytical thinking, and problem-solving abilities.
- Highly collaborative with a strong team-oriented approach.
- Quick learner with the ability to adapt to new technologies and requirements.

CERTIFICATES

- Python Programming Certificate - 2024
- MySQL Database Administration Certificate - 2024

PROJECTS

Project Domain : Fashion Trend

Client: Reliance

Technologies: Python, Django, SQL, MYSQL, ORM Concepts, Git, Github, AWS, HTML, CSS, JavaScript, React JS, Postman

Description: Next Wave is a fashion trends platform that identifies and showcases trending clothing for men, women, and children by analyzing data from multiple e-commerce sources. It involves data synchronization, processing trendrelated information, handling media content, and identifying similar products to present the latest fashion insights.

Roles And Responsibilities :

- Developed a fashion trends platform to identify and showcase trending clothing by analyzing data from multiple e-commerce platforms like Amazon, Nykaa, Meesho, and Flipkart
- Designed and built the application using Python and Django framework, ensuring scalability and flexibility
 - Implemented RESTful APIs for data processing, integration, and handling trend-related data collections .
- Developed reusable and responsive React JS components for product listings, category filters, trend displays, and user interaction modules to improve application performance and user experience
- Worked on data synchronization and analysis for trend data, images, and similar product identification
- Performed debugging and issue resolution in both development and production environments, and contributed to module development and unit testing .
- Implemented JWT-based secure authentication and rate limiting to enhance application security and performance
- Collaborated with team members and actively participated in Agile/Scrum activities including stand-ups, sprint meetings, and client discussions.

Project Domain : Insurance Management System

Client : DXC Technology

Technologies : Python, Django DRF, REST APIs, JSON, SQL, MYSQL, HTML, CSS, JavaScript, React JS , Postman ,GIT, GITHUB, Windows, Linux ,VS code

Description :

Insurance Management System is an enterprise application used for managing insurance policies, customer details, claims, renewals, and payment-related operations digitally. The system helps streamline insurance workflows by providing online policy management, claim processing, and customer support functionalities.

Roles & Responsibilities

- Developed and maintained backend REST APIs using Django REST Framework with both Function-Based Views (FBV) and Class-Based Views (CBV).
- Worked on database operations and managed customer, policy, and claim-related data using MySQL.
- Used Django Signals for handling automated actions such as notifications and workflow-related updates.
- Performed API testing and validated JSON request and response handling using Postman.
- Fixed backend bugs, resolved issues, and supported frontend team in integrating new features with backend APIs.
- Used Git and GitHub for version control, code management, and team collaboration activities.

Project Domain : Job Portal

Technologies: Python, FastAPI , MYSQL, GIT, GITHUB, AWS, HTML, CSS, JS, Postman

Description:

Developed a job portal application with job search, filtering, pagination, and personalized recommendations. Integrated multi-platform data processing to match eligible candidates with client requirements. Built a secure, scalable system with authentication, role-based access control, and notifications.

Roles & Responsibilities:

- Designed and developed **REST APIs** using **Python (modular architecture)** for job posting, user management, and applications
- Implemented **RBAC authentication** with roles like **Super Admin and Admin**, along with **JWT-based secure login**
- Applied **rate limiting** to restrict job applications (e.g., maximum 10 per day per user)
- Developed features like job search, pagination, filtering, and job recommendations
- Built a **notification system** for job updates and application status tracking
- Worked on debugging, performance improvements, and ensured smooth API functionality
